

## Reconnecting your iPhone/Ipad after your email migration

Remove your Exchange/Work email account.

Go to your Settings and select Mail, Contacts, Calendars

You'll see your current email account in the screen below. Open it and at the bottom you see Delete Account. Click that and your account info is removed from the iPhone. This won't delete anything from the server.

Now in the screen below click Add Account

Select the Exchange option

Enter your email address and your Enfield domain password

You can name the description whatever you'd like.

Click Next and the iPhone will automatically go out and find your email. You'll see green checks as it connects.

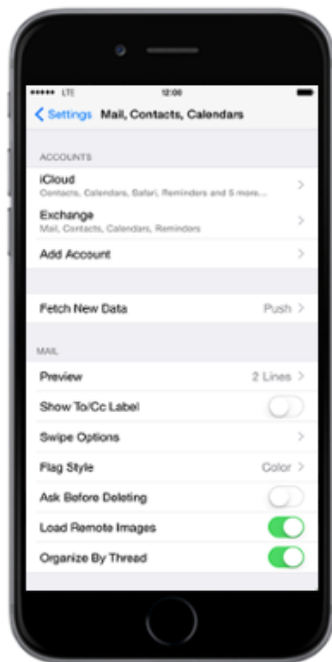

**If asked, the Server name is outlook.office365.com and the domain is Enfield. Your username is your entire email address.**

Select the options you'd like to sync you iPhone from your email.

You are all set! You should see your new email connection in the Settings\Mail, Contacts, Calendars window.

Now you can turn your phone's Wi-Fi back on.
